

Step 3

CREATE DESIGN BOARDS FOR YOUR FAVORITES

Once you've narrowed down your favorite designs ask ChatGPT to pull everything together into visual design boards that you can save with color palettes and notes like the example below:

Prompt:

Create a professional kitchen design presentation board using my uploaded kitchen photo and the product and material images that are my favorites.

Include my kitchen as the main image and organize my selections around it so I can see the overall design direction together. Include a finish/material palette and label the major selections such as cabinetry, countertops, backsplash, hardware, lighting, flooring and furnishings.

Use the actual products and materials I uploaded whenever possible rather than substituting different ones. Keep the design of my existing kitchen intact unless I specifically ask you to change something.

Advanced Prompts

Once you create your dream kitchen, don't stop there. ChatGPT can also help you make sense of your inspiration and design direction.

CREATE A KITCHEN STYLE GUIDE

Upload 5–10 inspiration images → identify common themes → create color/material/style direction → create visual style board.

ANALYZE WHY YOU LIKE AN INSPIRATION KITCHEN

You may save 100 kitchens without realizing you're consistently choosing inset cream cabinetry, warm stone, aged brass and simple pendants. Upload several favorites and ask: "What specific design elements repeat across these kitchens? Separate the architectural features from the finishes and furnishings so I can understand what I'm actually responding to."

CREATE A COORDINATED MATERIAL PALETTE FROM ONE SELECTION

Already fallen in love with a countertop slab? Upload it and ask:

"This countertop is one selection I've already made for my kitchen remodel. Give me several coordinated design directions for cabinetry, backsplash, hardware, lighting and flooring that would work with it. Explain how each direction would change the overall feeling of the kitchen."

COMPARE SELECTIONS WITHOUT ASKING AI TO CHOOSE

Upload two countertop samples or two pendants: "Compare these two options in the context of my kitchen style guide. Tell me how each would affect the overall look and what other selections each one would work well with. Don't choose one for me."

USE AI TO IDENTIFY WHAT DOESN'T BELONG.

This is sneaky-good. After creating a style guide, upload a product you're considering:

"Compare this pendant light with my Kitchen Style Guide. Tell me which elements coordinate with the direction and which elements feel inconsistent with it. Don't make the decision for me."

CREATE A "DESIGN DECISION LIST" FROM THE VISUALIZATION

Once you have an AI concept you love:

"Look at this kitchen and create a list of the design selections I would need to research or make to pursue this general look in a real remodel. Organize them by cabinetry, countertops, backsplash, appliances, plumbing, lighting, hardware, flooring and furnishings."
